

200 *m.p.h. cruising*

Airline Performance for the **PRIVATE OWNER**

The same basic characteristics which have established record-breaking performance, economy and long life for Northrop airplanes in commercial and military service, are part of every Northrop product. For such flying sportsmen as Hal Roach, Powel Crosley, Jr., Senator Harding and others, Northrop has combined its all-metal construction . . . its super speed in excess of 220 m.p.h. . . . and its greater payload capacity with transport roominess and comfort for the private owner. The cabin, completely sound-insulated and custom-finished, provides a new luxury in personal transportation that is a fitting attribute to the proven dependability of Northrop performance.
